

Wave-by-wave Statistics

RDS

RRDS

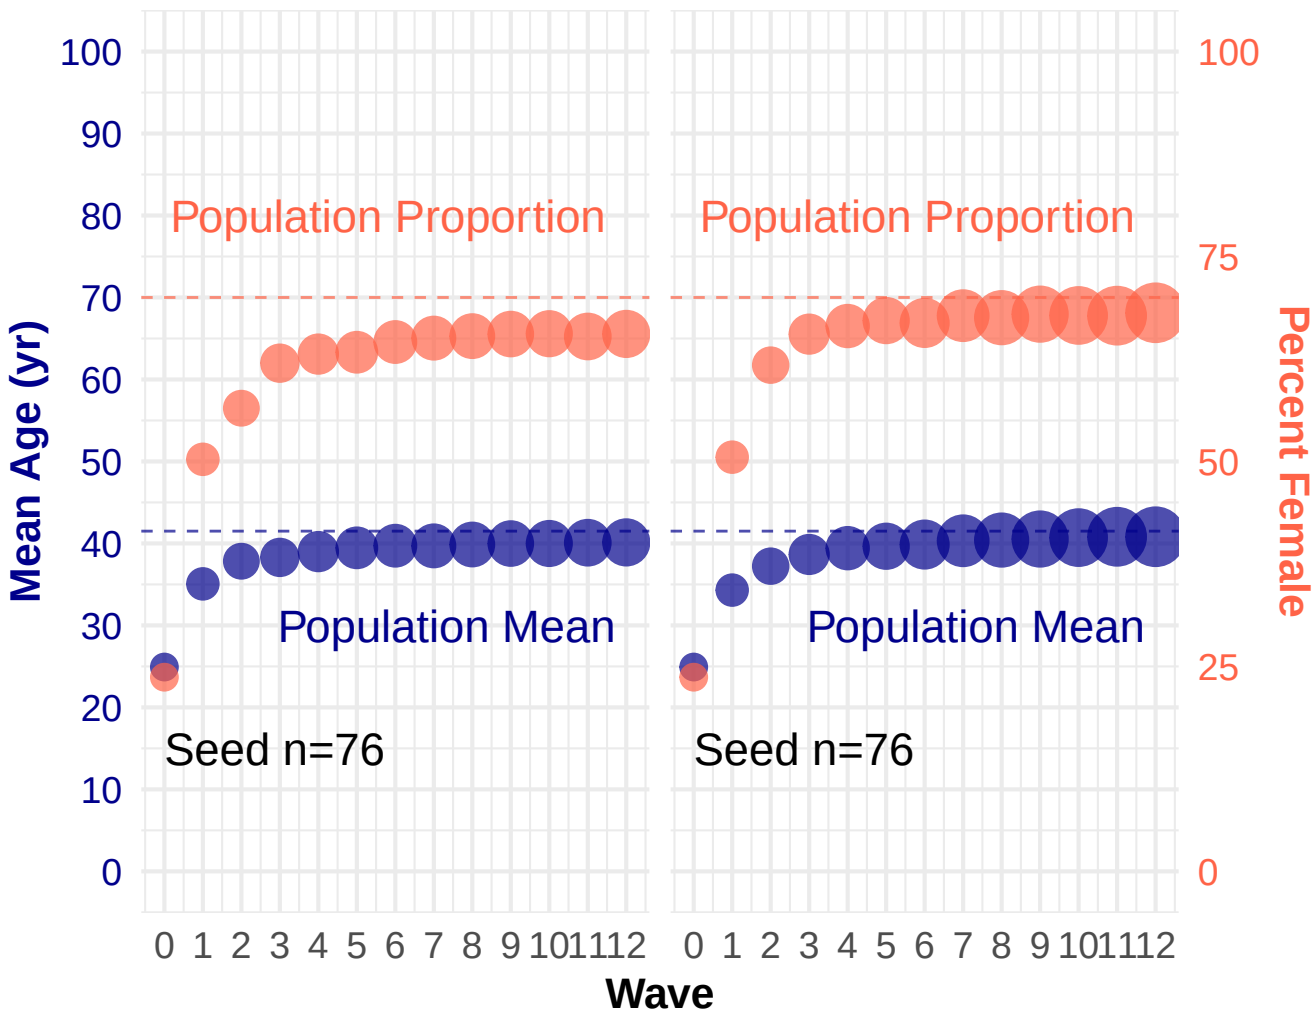

Number of Participants • 0 ● 500 ● 1000 ● 1500

Cumulative Statistics

RDS

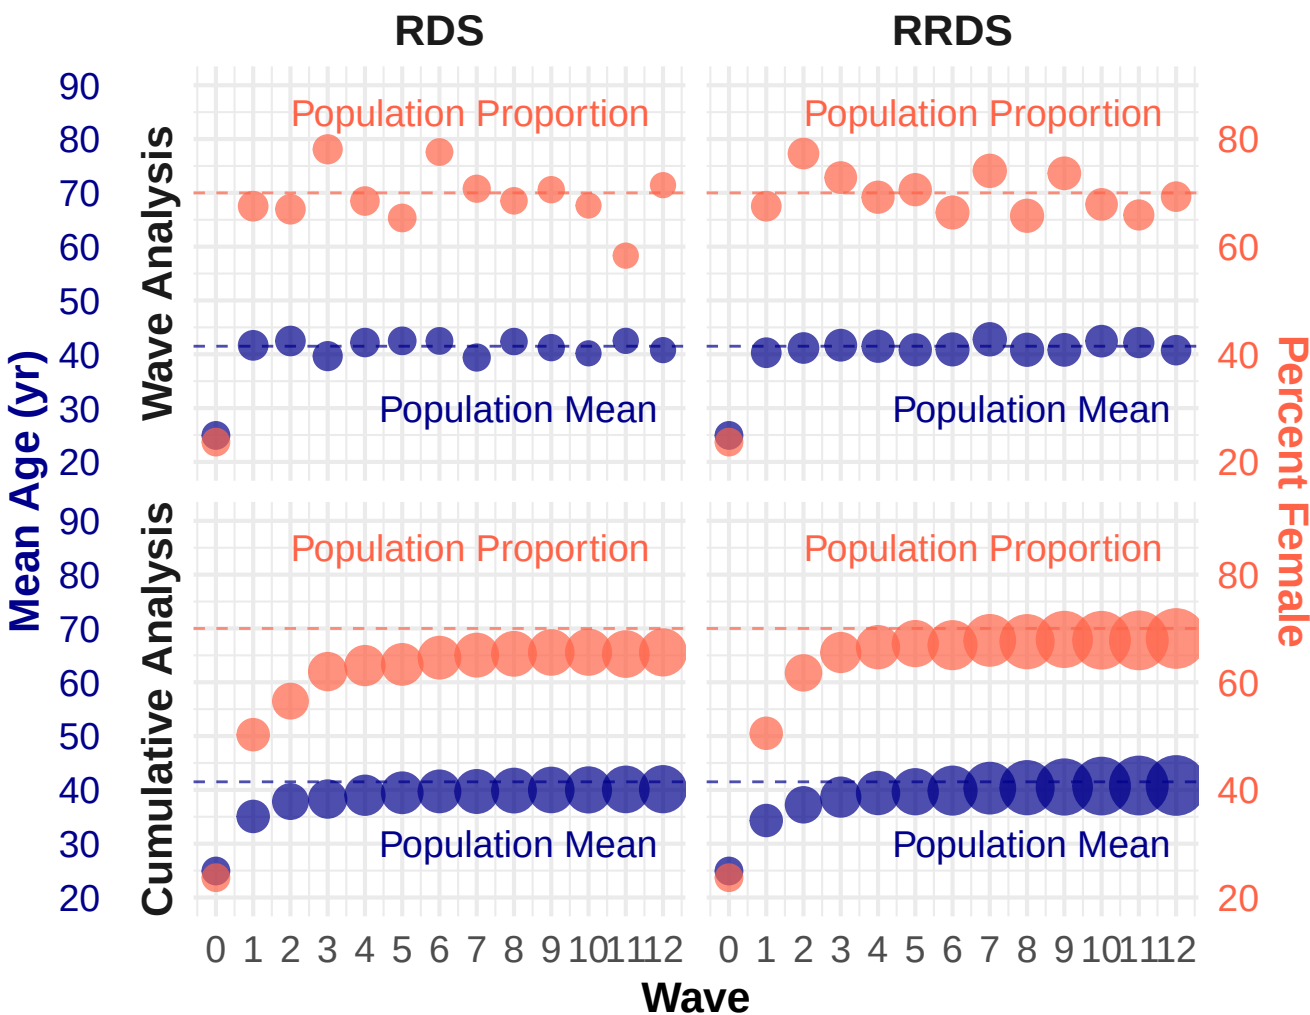

RRDS

Number of Participants • 0 ● 500 ● 1000 ● 1500

RDS vs RRDS Comparison: Wave and Cumulative Analysis

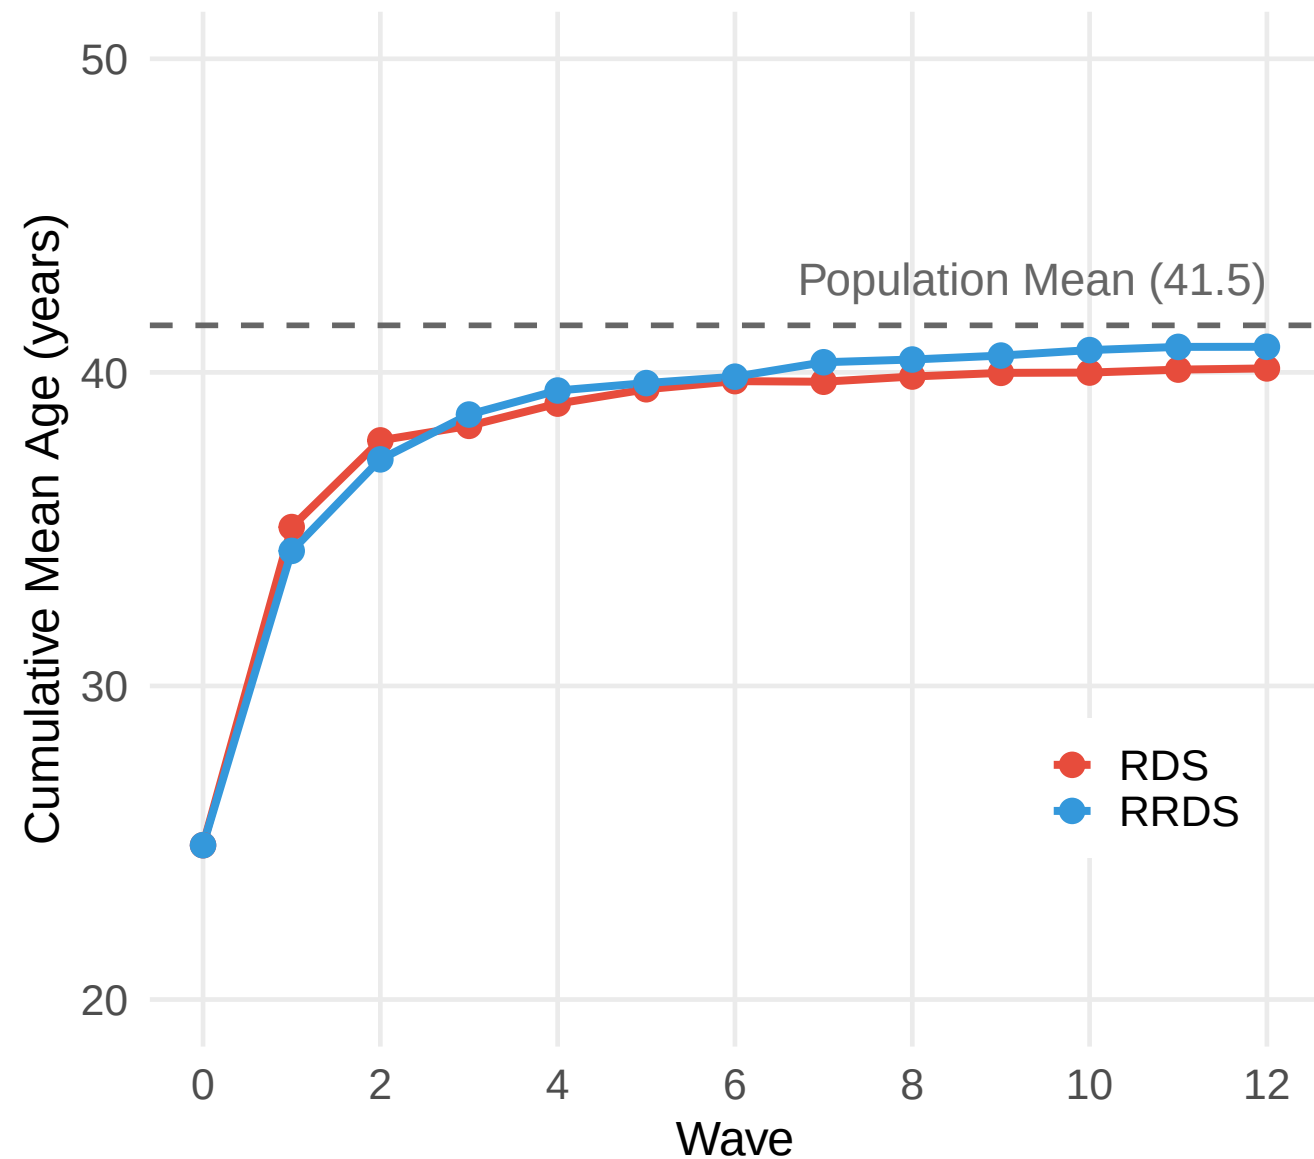

Burn-in waves: 0

Participants: 0, 500, 1000, 1500. Measure: Female (red), Male (blue).

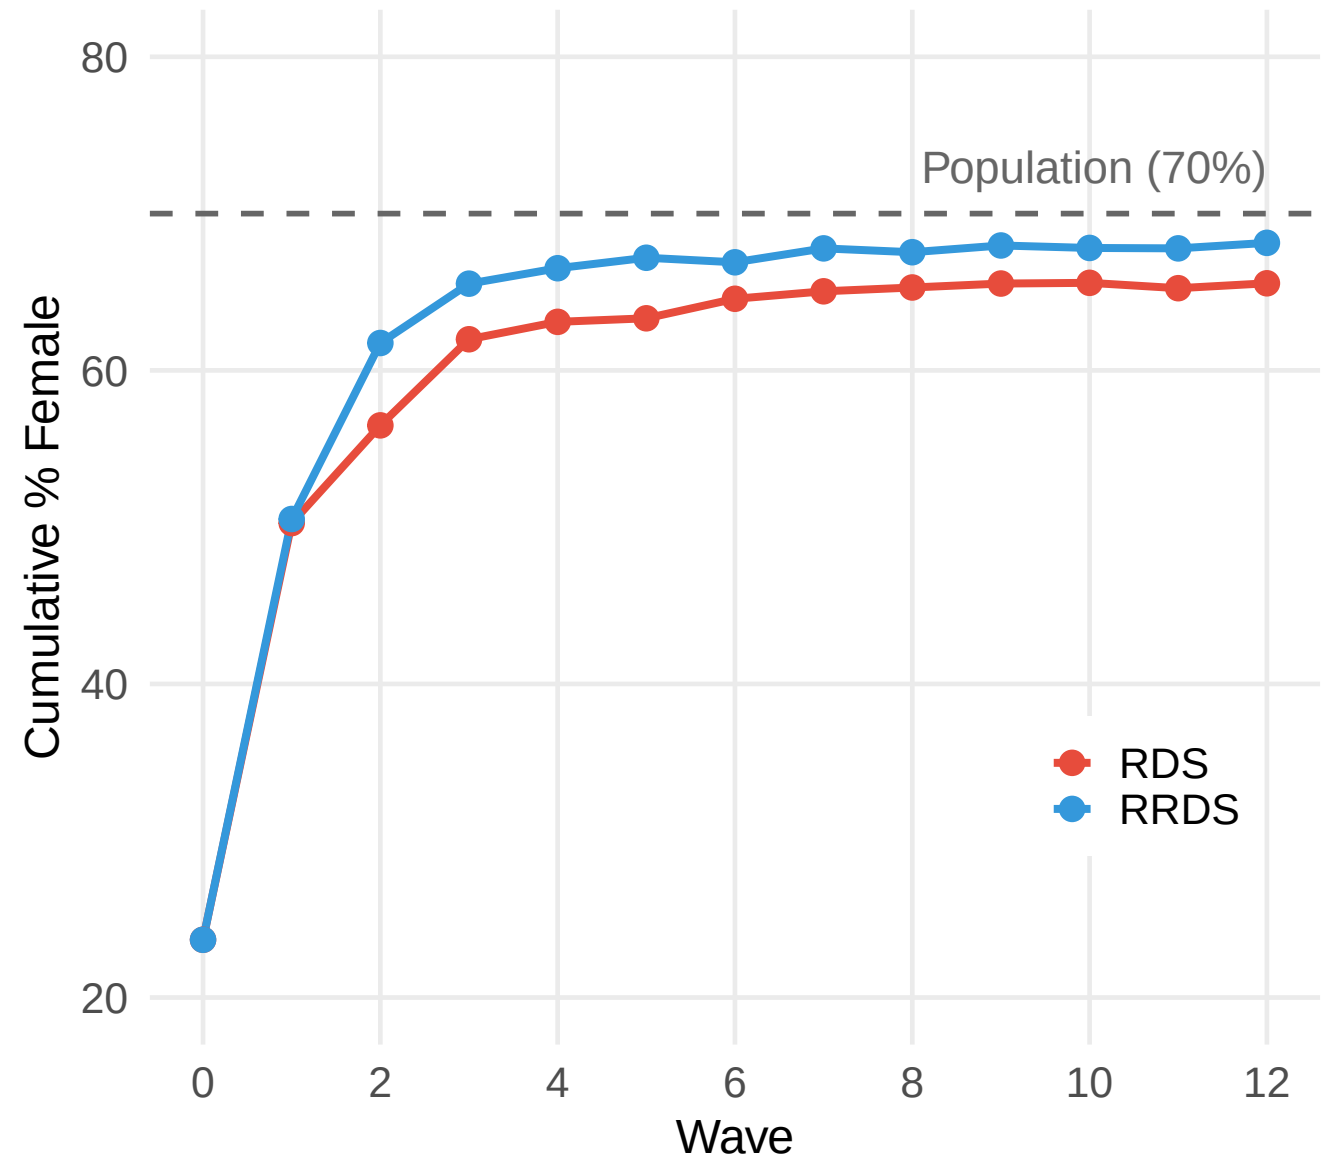

Convergence to Population Mean Age

Cumulative sample mean by recruitment wave

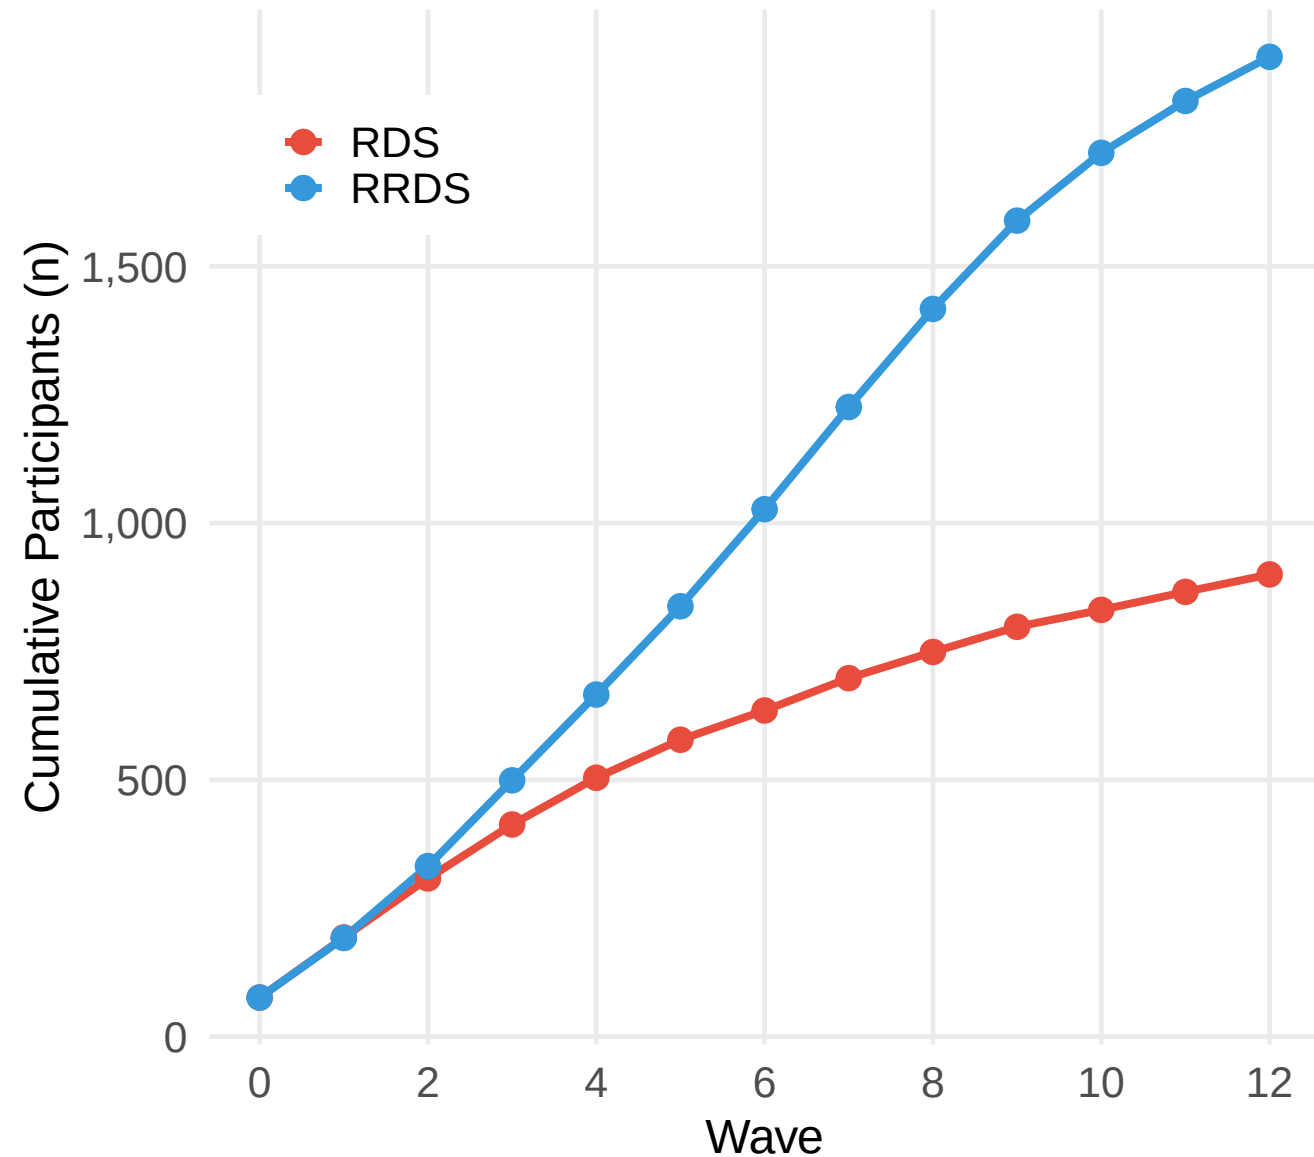

Convergence to Population Proportion Fem

Cumulative sample proportion by recruitment wave

Cumulative Sample Size

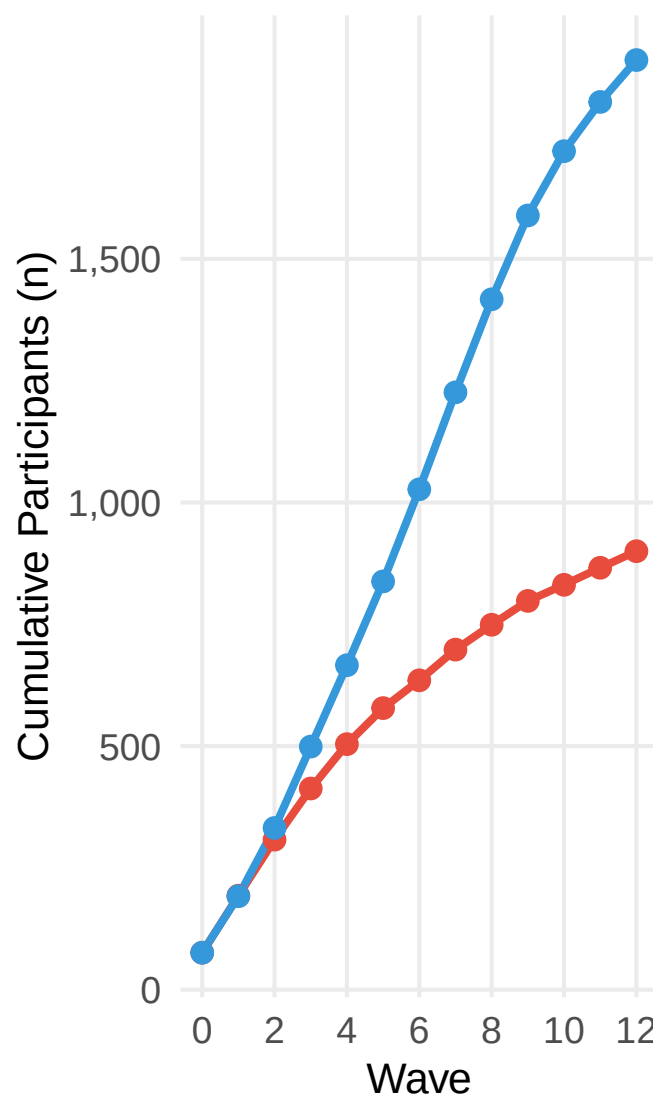

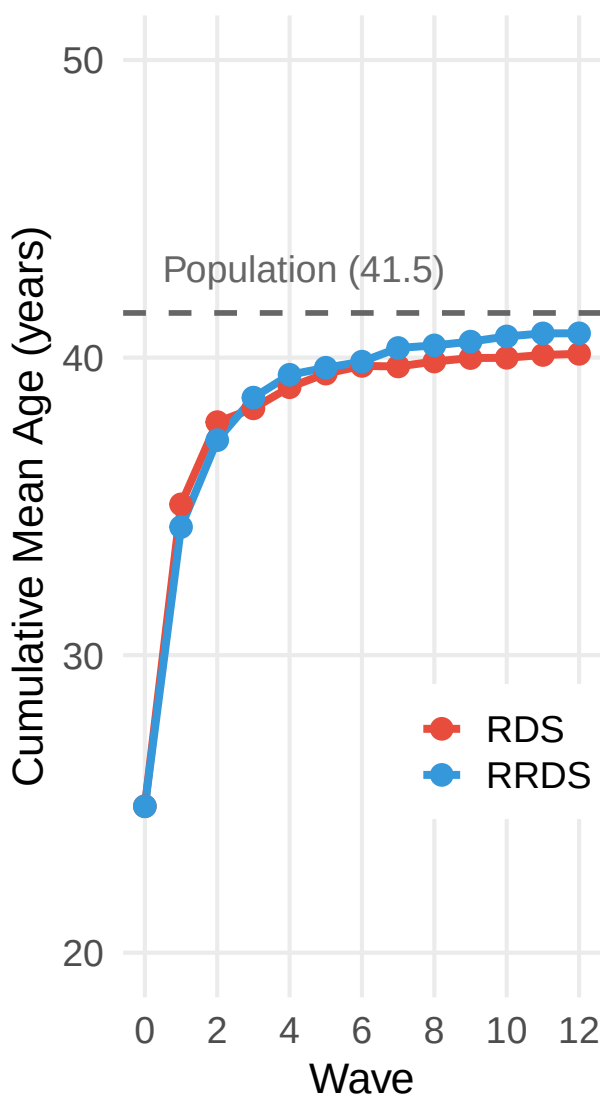

RRDS yields 112% more participants than RDS

RDS vs RRDS: Bias Correction and Sample Efficiency

Starting from biased seeds (mostly young men)

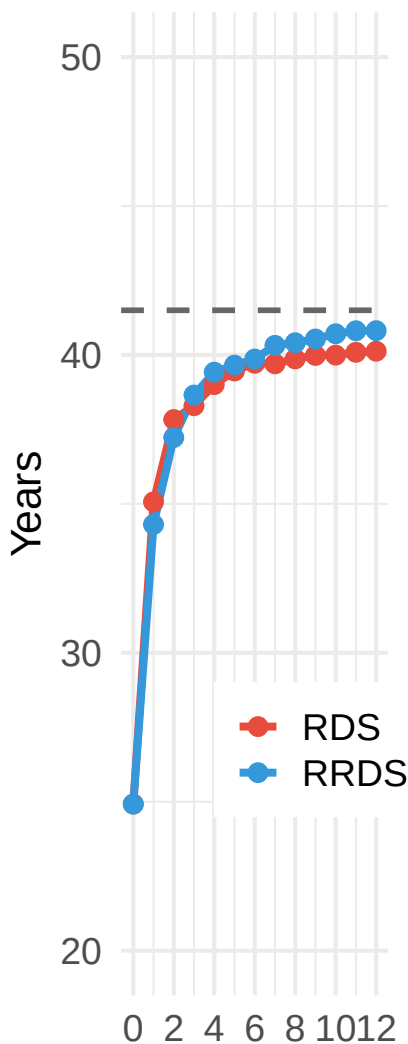

A. Convergence to Population Mean Cumulative Sample

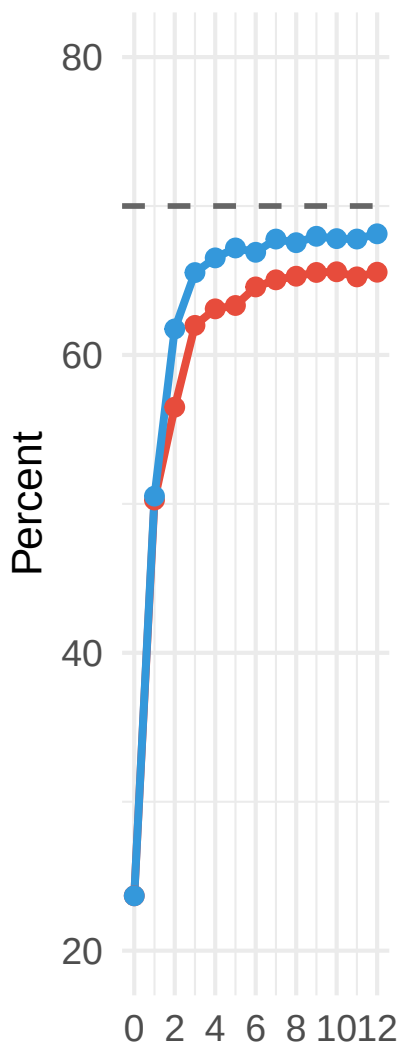

RDS vs RRDS Comparison

Cumulative statistics by recruitment wave (dashed lines = population target)

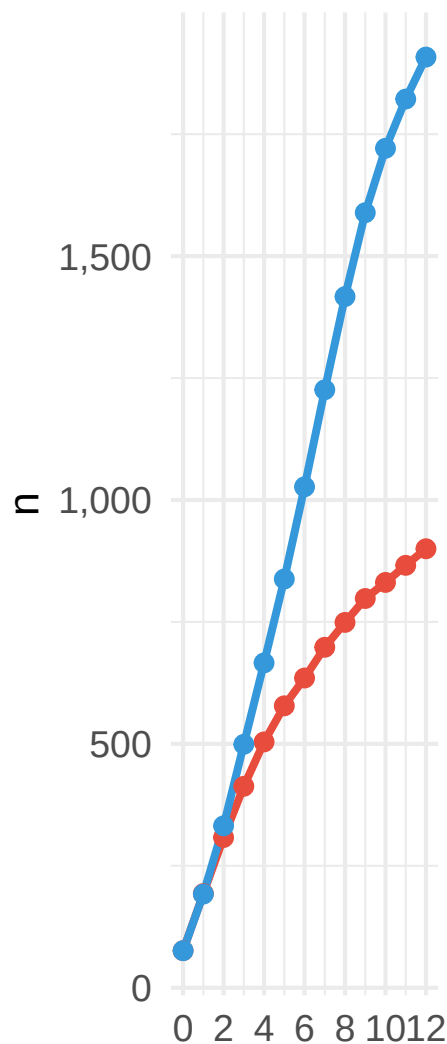

A. Mean Age

B. % Female

C. Sample Size

Seeds: mostly young men | Population: mean age 41.5, 70% female
